Instructions for Completion of Type 1 Facility Closeout Report

Additional Facility Information

B519 was a 1020 square foot Alarm Maintenance building constructed in the mid-1970's The facility had a frame structure with Transite walls and ceilings.

Recently, the building was used to store spare parts and equipment for the Alarms Maintenance Group. Prior to that, in the mid-1970's the building was used as a storage building for the B771 Maintenance Department.

The building had temporary power in the early 1990's, but that was subsequently removed. No other utilities were associated with this facility.

The slab of the facility remained after demolition of the superstructure for removal by ER. The slab was subsequently removed and disposed of.

There were no known spills in the facility, the facility was never used for RCRA waste storage, and is not associated with any known IHSS, PAC, or UBC.
